

AIKO

Aiko blossoms with ingenuity to deliver a cleverly designed ecological chair for a variety of office applications. Aiko has a sleek five-star base and the Syncro-Quickshift® Mechanism, which makes it easy to adjust to a wide range of body weights with less than half a turn of the lever, seat angle adjustment, and a choice of three back options: a breathable mesh back, a visually appealing poly-membrane back, or an upholstered pad on poly membrane back. This striking chair with its dynamic shape adds character to enrich all office settings.

LUMBAR SUPPORT
The adjustable lumbar support reduces the risk of lower back pain and fatigue throughout the day. In addition adjusting the lumbar support to the user will also optimize posture and comfort.

TENSION ADJUSTMENT
Adjusting the backrest tension for the best comfort is needed so the upper body is held upright, but is not pushed forward.

SEAT HEIGHT
In order to achieve a great posture, the adjustable seat height can adapt to the user. For optimal height, the thigh and lower leg together form an angle of at least 90°

TILT ADJUSTMENT LOCK
The seat and backrest follow the movements of the person sitting in a synchronized manner at the correct angle. With a noticeable adjustment of the constant backrest, counter-pressure is present in all working positions.

ADJUSTABLE ARMS (DEPTH)
Ergonomically positioned beneath the arm, the arms depth lever can extend the arm to the desired angle and depth.

SEAT DEPTH
In order to achieve a great posture, the adjustable seat depth can adapt to the user. In order to achieve optimum support for your thighs, use the seat depth adjustment.

VARIABLE BACKREST LOCK
The Syncro-Quickshift® mechanism can be easily locked in multiple positions so there is no excess pressure on the user's backrest with the best comfort possible.

ADJUSTABLE ARMS (HEIGHT)
The arms are height adjustable up to 4in. With the easy button release and lock system, the user is able to set the arms to their preferred height. The armrests are at the correct height when the elbows are resting on the arms and the shoulder and neck muscles are relaxed.
